

HOW **AEROBARRIER** IS INSTALLED IN BUILDINGS

AeroBarrier is a cutting-edge building science solution that will ensure your single-family or multi-family building construction projects meet deadlines, budgets, and perhaps most importantly, high performance air tightness standards.

HERE IS HOW INSTALLATION WORKS:

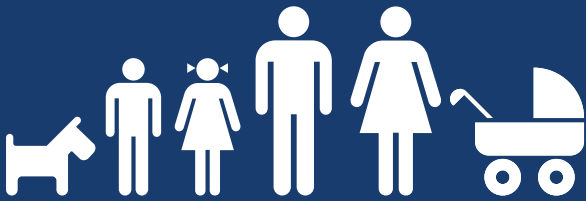

Equipment and Northeast Air Sealing technician arrive on-site

All areas where AeroBarrier sealing is not required are covered and taped off

The technician prepares AeroBarrier emitters and sealant compound

Building is emptied of all occupants and equipment

AeroBarrier is installed and the building envelope is monitored until the desired tightness is reached

Average AeroBarrier Installation Time:

4 HOURS
